PATENT NO. : 7,616,079 *B2*
APPLICATION NO : 10/530,507
DATED : NOVEMBER 10, 2009
INVENTOR(S) : PASI TIKKA

It is certified that an error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Title

Title

First page, Column 1, Inventor Stommer:
Delete [Neuhberg] and Insert - - Neubiberg - -

First page, Column 2, Abstract:

NO ~~Delete [The invention relates to a resonator operating with bulk acoustic waves (BAW resonator, BAW - Bulk Acoustic Wave) and band-pass filters constructed of such resonators. To increase the edge steepness of the transmission band of a BAW band-pass filter, the invention proposes reducing the effective coupling of a BAW resonator by using the connection in parallel of a BAW resonator and a capacitor instead of only one resonator. In addition, to increase the edge steepness of the transmission band, the use of a connection of coupled BAW resonators in the serial branch of a filter circuit with another resonator or resonator stack in the parallel branch of the filter circuit is proposed, the additional resonator or resonator stack being connected to the center electrode of the resonator stack specified initially.]~~

PATENT NO. : 7,616,079 *B2*
APPLICATION NO : 10/530,507
DATED : NOVEMBER 10, 2009
INVENTOR(S) : PASI TIKKA

It is certified that an error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below: *Title Page item 57*

NO ~~Insert — An apparatus includes a resonator for use with bulk acoustic waves. The resonator is made up of a lower layer region including a first electrode, an upper layer region including a second electrode, and a piezoelectric layer between the first electrode and the second electrode. A capacitor is in parallel with the resonator or in series with the resonator. —~~
